EXPERIENCE

Founder & CEO, Hire A Clanker
Mar 2026 – Oct 2026

- Conceived a GMAT-preparation product, built the initial website and core functionality, and developed the question content; collaborated with a co-founder on UX and interface improvements.
- Handed over the product and ongoing operations to the co-founder in October 2026.

Senior Software Engineer, Shell (via Andor Tech), Bengaluru
Nov 2024 – Feb 2026
Employed by Andor Tech; worked exclusively on Shell projects.

- Mentored 3 engineers (1 backend, 2 frontend), conducted code reviews, defined technical architecture, and managed delivery timelines across multiple initiatives.
- Architected a geospatial file-storage platform for carbon-credit projects across 2 Shell subsidiaries in Australia and Europe, managing 800+ files. Implemented a vector database for GIS querying, designed the PostgreSQL schema, and deployed a FastAPI backend with custom batch uploads.
- Led the Fiber to Desk sensor-visualization platform and Tag Configurator Tool using FastAPI, Django and React. Built a C# API to address PI Web API limitations, and implemented Microsoft Entra ID authentication and asynchronous tasks for a legacy Salesforce-based tag-management migration.

Software Engineer, Cisco (Security Business Group), Bengaluru
Jul 2022 – Jun 2024

- Developed a licensing-management component for next-generation firewalls using GWT, Perl and MySQL; managed enterprise license validation and optimized SQL queries with connection pooling.
- Received organizational recognition twice for resolving critical production escalations: a cryptography-library upgrade that broke license activation, and a race condition in multithreaded logic affecting enterprise customers.
- Built REST APIs and caching for license management. Fixed 15+ customer-reported defects, established daily bug triage with QA and support, and took on architecture decisions and technical mentoring.

Specialist Programmer, Infosys, Bengaluru
May 2019 – Jun 2022

- Designed and deployed Node.js/Express REST APIs with JWT authentication for a Saudi smart-city platform and a Belgian credit-insurance platform; integrated IoT devices and implemented Redis caching to reduce database load and improve stability.
- Refactored a legacy monolith towards microservices and optimized database queries. Built an asynchronous Excel-processing pipeline using Node.js, Bull and MongoDB for monthly employee records, with retries and background processing.

SELECTED PROJECT

Connectivity Credits – Independent Prototype Oct 2026
github.com/ankitpasayat/connectivity-credits-demo

- Built a TypeScript/Express and React prototype with PostgreSQL and Apache Kafka that evaluates synthetic school-connectivity measurements against versioned policies and records auditable demo credits. Verification and credits are simulated.
- Implemented duplicate protection, transactional rollback and safe retries, a durable outbox/inbox, and an operator console. Added automated API/broker tests, Docker/Compose setup, CI checks and a technical overview.

EDUCATION

B.Tech., Computer Science and Engineering
SRM Institute of Science and Technology, Chennai Jun 2015 – May 2019
Percentage: 80.11%

SKILLS

- **Languages:** JavaScript, TypeScript, Python, Perl, Java
- **Backend & events:** Node.js/Express, FastAPI, Django, REST APIs, Bull; Apache Kafka (prototype experience)
- **Frontend:** React.js, Next.js, Angular, GWT, HTML, CSS
- **Data:** PostgreSQL, MySQL, MongoDB, Redis
- **Cloud & tools:** Azure, Microsoft Entra ID, SSO integration, Git, Perforce
